Web Designing Event

About the Event

Frontend Frenzy is a dynamic web design competition where participants build visually stunning and highly responsive web interfaces using modern frontend technologies.

Unlike traditional coding contests, this event embraces the use of AI tools like ChatGPT, allowing participants to enhance productivity, generate ideas, and optimize their development process.

The challenge is not just about coding — it's about how effectively participants use AI + creativity + design skills to deliver an outstanding frontend solution within a limited time.

Event Description

Participants will be given a real-world problem statement or theme on the spot. They must design and develop a complete frontend solution within 1 hour.

With access to AI tools, the competition focuses on:

- Smart problem-solving
- Creative UI/UX design
- Efficient use of prompts and tools
- Fast and clean implementation

The final output should be a fully functional frontend prototype that solves the given problem effectively.

Event Details

- Team Size: Individual / Team of 2
- Duration: 1 Hour
- Requirement: Participants must bring their own laptops / System provided
- Internet: Guest Wi-Fi / Ethernet
- AI Tools: Allowed (ChatGPT, GitHub Copilot, etc.)

Technologies Allowed

- HTML, CSS, JavaScript
- Frameworks: React, Angular, Vue, Bootstrap, Tailwind, etc.

Output: Fully working frontend (No backend required)

Rules & Guidelines

- Participants must start only after the problem statement is given
- AI tools are allowed, but blind copy-paste without understanding may be questioned
- Pre-built templates are not allowed (AI-generated code is allowed)
- Participants must be able to explain their design and code
- Plagiarism between teams will result in disqualification
- Judges' decisions are final

Judging Criteria

- UI/UX & Design Quality – Visual appeal and usability
- Responsiveness – Works across devices
- Creativity & Problem Solving – Unique and effective solution
- Efficient Use of AI Tools – Smart prompting & integration
- Understanding – Ability to explain implementation
- Completion & Time Management

Event Workflow

1. Registration & Setup
2. Instructions & Rules Explanation
3. Problem Statement Release
4. Development Phase (1 Hour)
5. Mid-Twist Feature Addition
6. Submission
7. Evaluation & Judging
8. Results & Awards

Problem Statements

1. Food Delivery Web Application

- User login and registration
- Food menu display
- Add to cart
- Online order system
- Order tracking
- Example: Swiggy

2. E-Commerce Web Application

- Product listing
- Search bar
- Shopping cart
- User account
- Online payment
- Example: Flipkart

3. Online Gaming Web Application

- User login
- Game selection page
- Scoreboard
- Player ranking
- Game progress tracking

4. Social Media Web Application

- User profile creation
- Post upload
- Like and comment system
- Friend request
- News feed
- Example: Instagram

5. Movie Streaming Web Application

- Movie list display
- Search movies
- Video player
- Watchlist
- User ratings

6. Online Learning Web Application

- Student login
- Course listing
- Video lessons
- Quiz section
- Progress tracking

7. Online Banking Web Application

- Secure login
- Account balance view
- Money transfer
- Transaction history
- Bill payment

8. Hotel Booking Web Application

- Hotel search
- Room availability
- Booking system
- Customer reviews
- Payment option

9. Ticket Booking Web Application

- Event/movie list
- Seat selection
- Booking confirmation
- Online payment
- Booking history

10. Grocery Delivery Web Application

- Product list
- Search products
- Add to cart
- Delivery address
- Order confirmation

11. Online Pharmacy Web Application

- Medicine search
- Product details
- Order system
- Prescription upload
- Delivery tracking

12. Job Portal Web Application

- Job search
- Resume upload
- Job application
- Employer dashboard
- Notifications

13. Travel Booking Web Application

- Destination search
- Travel packages
- Booking system
- Payment option
- Travel schedule

14. Music Streaming Web Application

- Music library
- Search songs
- Playlist creation
- Audio player
- Favorite songs

15. Event Management Web Application

- Event listing
- Registration form
- Ticket booking
- Event schedule
- Notifications

16. Restaurant Table Booking

- Restaurant listing
- Table availability
- Booking system
- Menu display
- Customer reviews

17. Online Library Web Application

- Book search
- Categories
- Borrow system
- Reservation
- User account

18. Fitness Training Web Application

- Workout plans
- Exercise videos
- Progress tracking
- Trainer profile
- Daily reminders

19. Online Auction Web Application

- Product listing
- Bid system
- Auction timer
- Winner notification
- Payment system

20. Real Estate Web Application

- Property listing
- Location search
- Property details
- Contact agent
- Booking visit

Event Timeline

15 Minutes: Introduction & Allocation

- Welcome participants
- Explain rules and tools
- Announce problem statement

15 Minutes: Development Phase

- Build Login/Signup + Dashboard
- Develop core features
- Add UI and interactions

45 Minutes: Evaluation

- Judges review projects
- Quick explanation (if needed)
- Final scoring

Problem Allocation Method

To ensure fairness and excitement:

- All 20 problem statements are written on slips of paper
- Papers are shuffled before the event
- Each team picks one randomly
- The selected problem cannot be changed

Benefits

- Equal opportunity
- No bias
- Fun and engaging process

Organizing Committee

- Thanalakshmi (3rd Year) – Coordinator
- Pradeep (3rd Year) – Coordinator
- Varshini (3rd Year)
- Bhavaneeswari (3rd Year)
- Vinoth Kumar (3rd Year)
- Nagarajan (3rd Year)
- Kanyalakshmi (2nd Year)
